

## PACKAGING AND TRANSPORTATION

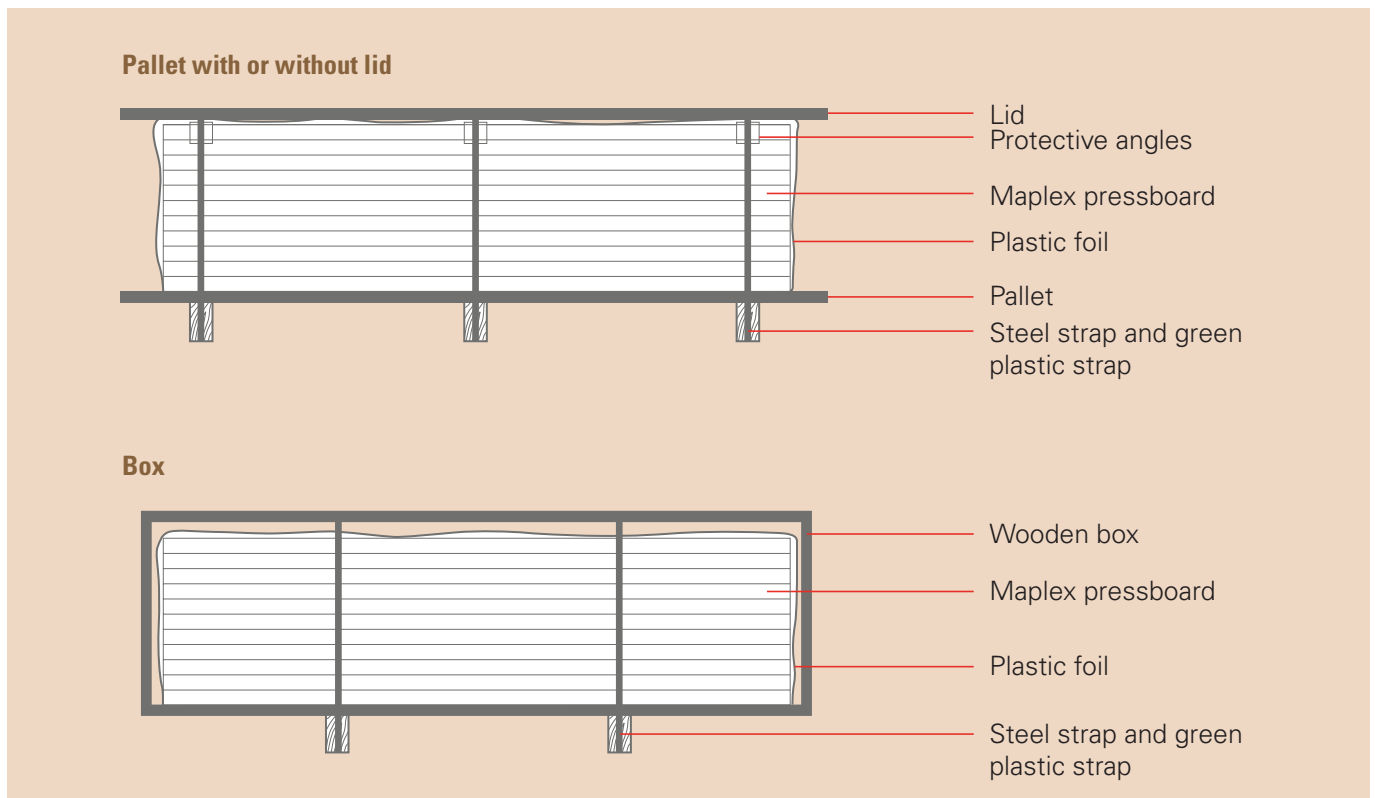

Maplex pressboard is made of pure, unbleached kraft paper grade pulp, a natural product obtained from wood. Due to its composition Maplex adapts to the climate conditions by absorbing or releasing the moisture. Please ensure proper storage conditions at your location to protect Maplex pressboard from direct exposure to the unstable ambient environment. Additional instructions on shelf life and storage recommendations can be found below and more detailed information can be found on our website.

Pallet

## DELIVERY WITH PRECAUTIONS

Maplex pressboard / panels are packed in plastic wrap and delivered on pallets in wooden boxes. The plastic wrap serves as a barrier against the moisture and offers the main protection against humidity, dust and dirt.

Note: pallet or wooden box weight limitation - 5000 lbs or 2300 kgs

## STORAGE IN ORIGINAL PACKING

Maplex always should be stored in dry rooms and protected from draughts in its original packing. Do not leave Maplex panels unpacked and uncovered for long periods. Due to fluctuating temperatures, do not store close to heaters or windows. Maplex sheets should not be placed directly on floors, rather on flat pallets or racks of well-dried wood to avoid surface damage and material curvature. During longer storage durations, Maplex sheets should be wrapped in strong packing paper, cardboard, or ideally in plastic wrap. These

simple protective measures slow down moisture absorption and prevent distortion of the sheets. It also guarantees good machining ability even after longer storage durations.

We encourage you to upcycle and recycle as many materials as you can so, please consider re-using, upcycling, and recycling any packaging, Maplex offcuts and please refer to our Return to Recycle program for excessive Maplex offcuts.
